BIG PROJECT

McGuire HX removed the Main Turbine Lube Oil Cooler in order for it to be shipped to Ohio for shell side cleaning. Upon return, HX re-installed the MTLOC and ECT subsequently completed testing of the component. Great job to all involved for finishing the job safely and on time!!

SAFETY PRINCIPLES

It takes all of us to be engaged in safety for every task, every day. Engaged employees will focus on the following safety principles:

PERSONAL ACCOUNTABILITY

Be responsible for your own safety

Know & follow safety rules & standards at all times – even when no one is watching

HAZARD RECOGNITION

Be aware of your surroundings at all times

Take time to actively mitigate hazards

Be fit for duty & capable to perform the task at hand

Participate in pre-job briefs & be aware of known hazards

ACTIVE CARING

Observe, stop & coach co-workers who are not in compliance or who exhibit at risk behaviors

Take action to ensure the safety of others and be willing to accept advice

GET TO KNOW...

- Commissioned: December 1, 1981
- Number of Units: 2
- Reactor Type: PWR
- Owner/Operator: Duke Energy
- Location: Huntersville, NC
- Cooling Source: Lake Norman (created by Duke Energy in 1963)
- License: The NRC renewed both units' licenses in 2003 for an additional twenty years.

McGUIRE NUCLEAR STATION

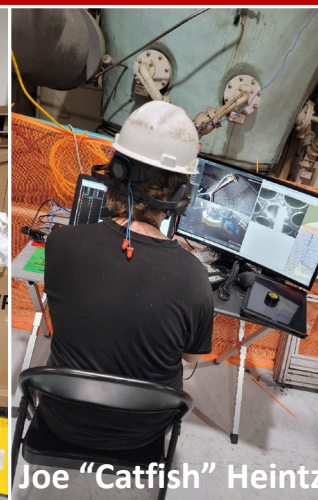

This Fall we sent an unprecedented number of technicians to McGuire (91 total between HX and ECT). Thank you all for your hard work!!
