

The Dose

DECEMBER
2025

The Merrick Group, Inc.

As we celebrate the season, we want to extend our sincere appreciation for your commitment and contributions throughout the year. Your efforts continue to strengthen our company and drive our success. We hope this holiday season is filled with joy and brings you well-deserved rest and time with loved ones.

Merry Christmas & Happy New Year!

Help us make a difference this holiday season, Toys for Tots donations are being accepted at the Hazleton office.

Venmo donations are also accepted - @TheMerrickGroup or by scanning the QR Code.

ENDS 12/9

SLIPS, TRIPS & FALLS

Slips, trips & falls account for over 30% of all accidents in the workplace. Here is a breakdown of those types of accidents and what we can do to reduce slips, trips and falls.

Slips & Trips on Same Elevation

Slips & Trips happen when there is lack of traction between a person's shoe & the walking surface. These can also occur when there's an uneven surface or an unexpected change in flooring or steps.

4.34%
of workplace injuries

Same Level Falls

Same level falls can occur anywhere which is why they're so common. Loose wires, wet floors, distraction, or unexpected items in the walkpath can cause someone to slip or trip.

17.67%
of workplace injuries

Falling From a Height

Falling from a height, such as ladder or scaffold can cause major injuries or even death. Distraction, over reach, over confidence, and improper harness use can cause someone to fall.

8.73%
of workplace injuries

What can we do to prevent ourselves and others from slipping, tripping and falling?

- Inspect PPE to ensure glasses are clean & boots laces are tied
- Plan your walk route to ensure it is safe and well lit, remove obvious trip hazards
- Limit the items you carry in order to increase your ability to react
- Recognize hazards ahead & their potential risks
- Stay alert & cautious, focus on walking
- Avoid phone/tablet use while traversing
- Inspect harness & wear properly
- Do not be overconfident in your ability to avoid a slip, trip, or fall
- Maintain good housekeeping in all work areas.
- Mark wet areas and treat accordingly
- Use handrails and/or maintain three points of contact

**Congratulations
JARED REBER!**

This fall we changed our picture submission contest up, anyone who submitted pictures for The Dose was entered into a drawing.

Thanks to everyone who participated, as always we love seeing your teamwork and adventures while on the road!

Photos can be sent to ahudock@mginc.net

"I want to thank the Merrick team and especially those that came on site and performed the work. The entire team was very professional and worked safely and efficiently to complete the scope of work. Your team's commitment to focusing on safety and their drive to complete the work early was a true testament to why good job prep, planning, and work execution is very important. Thank you and look forward to the next opportunity to work with your team."
